SAMPLE PREPARATION AND METHOD/PROCEDURE:

The experiment has been performed on herbal henna mehandi without adding any additive to speed up the drying rate. For this experimental run, some amount of sample was taken and placed it on a microwave safe tray with uniform layer of thickness about 5 mm. Observations are made after every 10 minutes. Initial weight before drying, final weight after drying, initial moisture content and final moisture content has been taken.

ANALYTICAL RESULTS:

Setting Temperature: 70°C Microwave Power: 0.5 kW

Initial Sample Weight: 250 grams
Initial Moisture Content: 6.4%

OBSERVATIONS:

The Drying behavior of herbal henna (mehandi) powder has been investigated under the microwave irradiation mode dryer. The drying rate is found to be decreasing with respect to increasing drying time. It has been found that the moisture content on the dry basis (%) decreases with respect to increase drying time. As per physical investigation, it has been observed that there is no colour change and no textural change in the processed sample.
